

“ We chose LEDiL lenses because of their technical and qualitative features. ”

Roberto Bolzan
CEO of BRILLAMENTI

BENEFITS

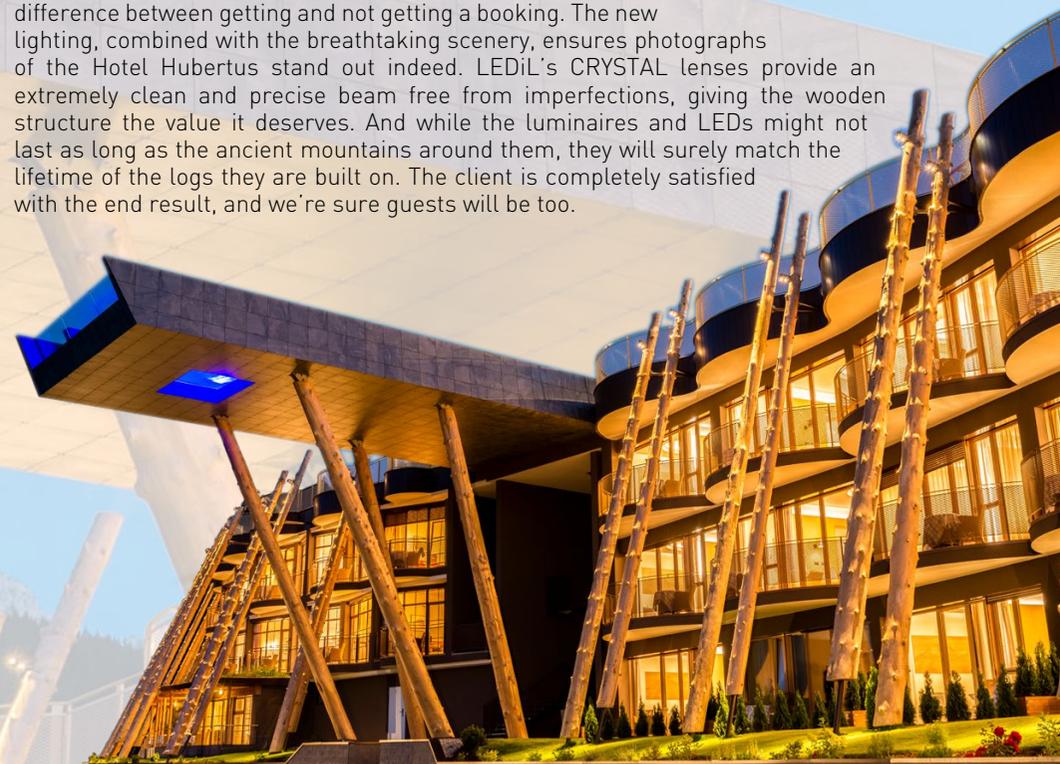

When browsing a long list of hotels on the Internet, the first picture a customer sees of a hotel can often make all the difference between getting and not getting a booking. The new lighting, combined with the breathtaking scenery, ensures photographs of the Hotel Hubertus stand out indeed. LEDiL's CRYSTAL lenses provide an extremely clean and precise beam free from imperfections, giving the wooden structure the value it deserves. And while the luminaires and LEDs might not last as long as the ancient mountains around them, they will surely match the lifetime of the logs they are built on. The client is completely satisfied with the end result, and we're sure guests will be too.

PROJECT

The Hotel Hubertus is an Alpine Panorama hotel located in Northern Italy with stunning views of the Dolomites and Rieserferner Group. Part of the hotel renovation project was to make the outdoor areas more appealing and inviting; especially during the evenings and at night. BRILLAMENTI, a company of Italian artisans specializing in LED lighting, was given the task of renewing the outdoor lighting, paying special attention to highlighting the creative stripped log structures around the hotel.

SOLUTION

New luminaires were designed specifically to light the massive logs that make up the hotel façade. LEDiL's CRYSTAL lenses were chosen to provide the narrow beam required and a new luminaire, made from varnished faux corten, was developed around them. The lenses allowed the logs to be illuminated from top to bottom creating a dynamic effect of light and shadow, bringing the whole environment to life.
